

How AAA helped Jacobson create a resilient warehouse.

Before:

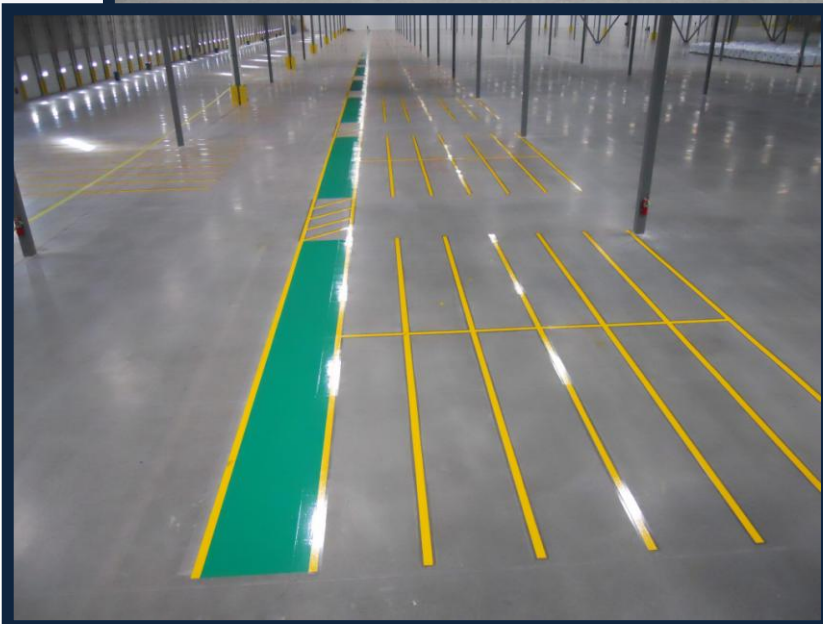

Jacobson, a worldwide transportation & logistics company came to AAA Painting in need of warehouse floor striping on a ½ million square foot warehouse. Jacobson was leasing the warehouse which had sat empty for 2 years. Jacobson needed the striping to last 3-5 years, and the lines needed to be crisp and precise. This was an opportunity for AAA to be innovative since typical striping jobs on heavy traffic facilities typically last about 6 months.

During

AAA took an innovative approach on the Jacobson project by shot blasting the lines to embed them into the floor rather than painting them on top of the floor.

- AAA applied 2 coats of 100% solid epoxy in yellow
- AAA covered the floor with 1 coat of 100% solid epoxy clear coat.

After

Jacobson had a durable epoxy floor with crisp and precise striping. The end result included:

- 54,000 linear footage of striping
- 40 -2x2 squares and a 3,700 square foot walkway were completed.
